

Non-Louvered Vertical Pedestals (NLVP)

Non-louvered pedestals for housing passive (non-heat generating) CATV/Broadband components

Charles Industries' Non-Louvered Vertical Plastic Pedestals provide mounting facilities and security for taps, splitters and line extenders. Each pedestal comes equipped with your choice of either a galvanized or powder-coated mounting stake, as well as one of many optional bracketries to provide you with greater installation flexibility. Each mounting stake is equipped with slotted holes and offers easy installation of your hardware and equipment. During installation, simply bury the pedestal base to the desired depth and backfill. The mounting stake and pedestal top-slide channel add to the security and craft friendliness of pedestal assembly operation. A variety of locking options are available to address your specific security needs.

Non-Louvered Vertical Pedestals have a rectangular design with rounded corners. These pedestals are molded from a polyethylene specifically designed to resist impact, ultraviolet and environmental degradation.

Product Features

- Secure and cold weather, high-impact resistant
- Multiple lock, bracketry and color options to satisfy all hardware needs
- Craft-friendly cover slides easily into locking position
- All hardware and bracketry options are constructed of aluminum and stainless steel
- 360° access and rectangular shape provide increased workable area

Models & Sizes

Model	Internal Dimensions (in)		External Dimensions (in)	
	Width	Depth	Cover Height	Overall Height
101	8	7	15	22
102	9	8	19	26
103	12	10	21	27
104	12	11	28	36
107	16	14	31	43

Lock Options

Charles offers a variety of lock options including the popular self-locking dome system. This lock system consists of a spring-loaded lock (hook) installed in the pedestal top that automatically engages a base catch installed in the pedestal base. No tools are required for lock activation. Simply align the pedestal top over its base and let go. An audible metallic click signifies that the pedestal is properly locked. The lock (hook) is unlocked by a 1/4 turn rotation of the tamperproof bolt. Available patterns shown below.
