

STARTNow

In-Dash Remote Indicator Light

93-STARTNWRMT-A

StartNow In-Dash Remote Indicator Light
(for use with 93-STARTNOW-A)**Installing the StartNow Remote Indicator:**

Note: Do not remove adhesive backing from bezel until Step 5.

1. Using the Positioning Template on card, position StartNow Remote Indicator.
2. Drill a 11/16" hole. Drilling a small pilot hole may aid in accuracy.
3. Remove nut and lock washer from StartNow Indicator.
4. Test fit StartNow Remote Indicator in hole. Clean surface to remove dirt.
5. Carefully remove the backing off the StartNow Remote Indicator bezel. Position the StartNow Remote Indicator in the hole and check alignment carefully before completely seating the indicator. Press firmly to set the adhesive.
Note: The adhesive is permanent. The bezel position cannot be changed once set into position.
6. Secure the StartNow Indicator with the nut and lock washer.
7. Connect the red wire to the StartNow remote stud using stranded 22 AWG wire (not supplied)
8. Connect the black wire to any convenient ground point using stranded 22 AWG wire (not supplied). If a ground point can't be found, connect to the negative terminal of either the main or reserve battery.

Testing the StartNow Remote Indicator:

9. Connect a battery charger to the main battery. Within several minutes, the StartNow Remote Indicator should start to flash slowly. If the main battery is drained, the main battery must be recharged before the reserve can begin to charge.

StartNow Remote Indicator Indications:

Constant On
Slow Flash
Fast Flash
Constant Off

StartNow Active
Reserve Battery Charging
Reserve Battery Low
StartNow Idle
