

Amphenol Charles industries (ACI) light duty below grade vaults and vertical pedestals are made of robust UV stabilized HDPE.

For greenfield network deployments, a fiber-based access network provides a future-proof platform to overlay HFC to RFOG or EPON technologies

ACI offers purpose designed pedestal and vault combination solutions that provide an ideal protective mounting space for fiber terminals along with spacious storage area for fiber slack or even an additional splice case.

The vaults come with a split cover with an opening to mount the pedestal and run fiber on one half and easy access to the below grade storage area on the other half. There are two sizes available: 17x30x18 inches or 24x36x24 inches.

The pedestals come with a mounting stake that includes a C-strand bracket along with hardware to mount the pedestal base to the vault. They include a self-latching standard 7/16" quarter turn hex lock. The pedestals are available in two sizes. The B05 is 12x12 inches internal with a 24" dome. The Z06 is 12x12 inches internal with a 30" dome. The standard color is light green. Either size pedestal can be installed onto to either size vault.
